

Student Showcase: From Data to Front-End

Phase 1: Model Development

Data Cleaning & Normalization

Students analyzed and refined Titanic dataset features to optimize model accuracy.

Random Forest Machine Learning

Selected and trained a robust model to generate survival predictions.

Phase 2: Deployment & Interface

Flask API Integration

The machine learning model was deployed as a backend API for real-time connectivity.

Interactive Web UI

Users input criteria to receive survival predictions and visual statistical analyses.
